ENTERPRISE DASHBOARD SYSTEM

Data-Driven Business Strategies

How do you make critical business decisions? Do you have the information you need to support your production policies and pricing? Do you truly know which loan officers, branches, correspondents or brokers originate the most profitable production, or perhaps more importantly, the least profitable production?

Business Intelligence with PRECISION

The PRMS Enterprise Dashboard System provides unsurpassed management and production reporting in a configurable, easy to use dashboard-based solution that supports the entire organization. Immediate graphical feedback is always available, backed by detailed management reporting. Key Performance Indicators and focused management information ensure that each user views what is important without sifting through volumes of reports. The Enterprise Dashboard System is highly configurable allowing each user to customize the content and appearance of his dashboard, providing immediate visibility into critical business issues. Management has all the tools necessary to pinpoint business problems, understand production performance and create pricing strategies and policies for the entire organization.

Advanced Technology Made Simple

PRMS' Enterprise Dashboard System utilizes the latest web-based technology and is designed to allow organizations to consolidate information from multiple data sources such as loan origination, servicing and accounting into a single, graphical view of the organization. From the dashboard, users are always just a click away from viewing the detailed reporting behind the dashboard graphic, "slicing and dicing" information on demand or extracting critical information into a Microsoft Excel workbook for further analysis. The system is accessible via a **web browser**, **tablet device** or **smart phone**.

The Enterprise Dashboard System is delivered with a comprehensive suite of corporate reporting, all of which can be customized by business users.

ENTERPRISE DASHBOARD SYSTEM

The Information You Need - When You Need It

PRMS provides information to the organization in meaningful ways. Until now lenders had to cobble together output from loan origination systems, spreadsheets and separate risk management tools in an attempt to analyze their loan production and the organization as a whole. The PRMS Enterprise Dashboard System brings it all together in a single web-based solution, combining comprehensive reporting from all areas of the organization.

Management can now view the entire organization in a single, focused view; highlighting all facets of the enterprise and focusing on business problems that require immediate attention. The PRMS Enterprise Dashboard System provides up to the minute performance information about the entire organization which allows management to understand key metrics such as:

- Pipeline Composition
- Pipeline Velocity
- Underwriting Turn Times
- Expected Closings
- Regulatory Action Triggers
- Corporate Cash-flow
- Foreclosures
- Early Defaults

The Enterprise Dashboard System has a proven record of success. Contact PRMS today to get started.

Powerful Customization and Dashboard Development Tools

In addition to being a robust Dashboard Reporting System that is customizable by business users, EDS is a powerful development solution for your IT organization. EDS is delivered with all the tools necessary to support the internal dashboard and reporting development requirements for the entire organization.
